

Amendments to the Claims:

A listing of the entire set of pending claims (including amendments to the claims, if any) is submitted herewith per 37 CFR 1.121. This listing of claims will replace all prior versions and listings of claims in the application.

1. (Currently amended) Messaging system, comprising acquisition means (12, 42, 73, 74a, 74b) for acquiring audio and[[/or]] video data, database means (16) for storing sets of situational information (32a, 34a, 36a) and messaging information (32b, 34b, 36b), processing means (14) for processing said audio and video data, said processing means (14) being configured to match said audio and video data to one of said sets of situational information (32a, 34a, 36a) and for selecting and/or configuring messaging information (32b, 34b, 36b) according to said matched situational information (32a, 34a, 36a), and presentation means (18, 75a, 75b) for presenting the selected or configured messaging information (32b, 34b, 36b).
2. (Currently amended) The A-system according to claim 1, where said database means are configured to store sets (32, 34, 36) of situational information (32a, 34a, 36a) and associated messaging information (32b, 34b, 36b), and where said presentation means (18, 75a, 75b) present the messaging information (32b, 34b, 36b) associated with the matched set of situational information (32a, 34a, 36a).
3. (Currently amended) The A-system according to claim 1, comprising a device (70) including said acquisition means (73, 74a, 74b), said processing means and said presentation means (75a, 75b), said device (70) further including interface means (76) for connecting to a remote server, where said server includes said database means.

4. (Currently amended) The A-system according to claim 1, comprising
a device including said acquisition means and said presentation means, said device further including interface means for connecting to a remote server, where said server includes said database means and said processing means.
5. (Currently amended) The A-system according to claim 1, wherein said processing means (14) include means for speech recognition to convert said audio data to text data.
6. (Currently amended) The A-system according to claim 5 [[4]], wherein said situational information (32a, 34a, 36a)-database means (16) includes keywords and said processing means (14) are configured to scan said text data for said keywords.
7. (Currently amended) The A-system according to claim 1, wherein said database means (16) include sets of person identification information of at least one person and said processing means (14) include person identification means to identify a person using said audio and video data and said person identification information.
8. (Currently amended) The A-system according to claim 7, wherein said database means (16) includes at least one profile of a person and said processing means (14) uses said profile to determine messaging information associated with said identified person.
9. (Currently amended) The A-system according to claim 1, wherein said processing means (14) include means for object recognition to convert said video data to object data.
10. (Currently amended) The A-system according to claim 9, wherein said situational information (32a, 34a, 36a)-stored in said database means (16)-includes object information and said processing means (14) are configured to compare said object data to said object information.

11. (Currently amended) Messaging A messaging method, wherecomprising:
acquiring audio and[/or] video data are acquired;
accessing a database (16) is accessed which stores sets (32, 34, 36) of
situational information (32a, 34a, 36a) and associated messaging information (32b,
34b, 36b);
where processing said audio and video data is processed to match said
audio and video data to one of said sets of situational information (32a, 34a, 36a) and
presenting the messaging information (32b, 34b, 36b) associated with the
matched situation information is presented.

12. (new) The messaging method of claim 11 further comprising:
configuring the database to store sets of situational information and
associated messaging information, wherein
the messaging information is presented in association with the matched
set of situational information.
